

Installation on mijn.host hosting

Clone git repo first, then install Drupal, providing details manually to the installer.

```
composer install
./vendor/bin/drush site:install --locale="nl"
```

Make a note of the provided username and password.

Now export the crm user name and pass

```
set +o history
export CRM_DB_USER=
export CRM_DB_PASS=
```

Now install CiviCRM:

```
cms_url=$(pwd | awk -F "/" '{print $5}')
ln -s ../../libraries/civicrm public_html/libraries/civicrm
mkdir -p public_html/sites/default/files/civicrm/110n/nl_NL/LC_MESSAGES
curl -L -s -o public_html/sites/default/files/civicrm/110n/nl_NL/LC_MESSAGES/civicrm.mo
https://download.civicrm.org/civicrm-110n-core/mo/nl_NL/civicrm.mo
cd public_html
chmod +w sites/default/
set +o history
./vendor/bin/cv core:install --url="https://${cms_url}" --
db="mysql://${CRM_DB_USER}:${CRM_DB_PASS}@localhost:3306/${CRM_DB_USER}" --lang="nl_NL"
```

Answer any question that pops up (e.g. db already populated) and run these commands to finish civicrm installation

```
set -o history
chmod -w sites/default/
cd ..
./vendor/bin/drush cr
```

Now some manual work:

With vi open settings.php file:

```
vi public_html/sites/default/settings.php
```

Edit the last row and change the provided path to ../config/sync

```
#E.g. change:
$settings['config_sync_directory'] = 'sites/default/files/config_7Mlw0xeTGW_fmBMDS-
RmPr29yA3WsBBqcdHxM0_BE1S9DRichbda04ZmUQeV_yJD0tRu4Rk_dA/sync';
#into:
$settings['config_sync_directory'] = '../config/sync';
```

When done, load the site config with the following commands

```
site_id=$(cat site.id)
./vendor/bin/drush config:set system.site uuid $site_id -y
./vendor/bin/drush config:delete shortcut.set.default -y
nl_uuid=$(grep uuid ./config/sync/language.entity.nl.yml | awk '{print $2}')
./vendor/bin/drush config:set language.entity.nl uuid $nl_uuid -y
./vendor/bin/drush config:import -y
```

Revision #14
